

Introducing a new concept in wireless vehicle detection by Microtech Designs. The inground **e-Loop** replaces traditional wired inductive loops, saving time and money while increasing reliability.

Kit Includes

- 1 x **e-Loop** wireless inground module
- 1 x single channel transceiver
- 1 x magnet

Wireless Vehicle Detection System

Installation in 3 simple steps

- ① Code in the **e-Loop**
- ② Core bore 89mm hole 70mm deep and secure using flexible mastic
- ③ Calibrate the **e-Loop**... and you're ready to operate in less than 30 minutes.

Save **many** hours of installation time compared to wired loop systems.

Features

- Dual sensing technology
- High security 128 bit encryption
- Quick and easy installation
- Recesses into driveway
- Not affected by ground movement
- 14500 mA battery giving up to 10 years battery life
- Top access for changing battery
